

Jaspreet Singh

Backend Developer

Email	jaspreet2005g@gmail.com	Phone	98xxxxxx31
GitHub	github.com/Jaspreet-5	Location	India
Portfolio	jaspreet-dev.netlify.app	LinkedIn	Jaspreet Singh

Professional Summary

Backend Developer building scalable REST APIs and message-driven microservices with Node.js, Express.js, TypeScript, MongoDB, and SQL. Hands-on with secure authentication and role-based access control (RBAC), asynchronous service messaging through RabbitMQ, and load testing for speed and reliability. Driven by backend architecture and system design, with a focus on building production-ready software.

Core Competencies

REST API Design

Clean, scalable services in Node.js and Express

Auth and RBAC

Secure, role-based access control

Microservices

Async service messaging via RabbitMQ

Performance

Indexing, rate limiting, and load testing

Technical Skills

Languages JavaScript, TypeScript, Python, C/C++

Backend Node.js, Express.js, REST APIs, Microservices, RabbitMQ, API Gateway, RBAC

Databases MongoDB, MySQL, Redis, Database Indexing

Frontend React.js, Next.js, Tailwind CSS

Tools Git, GitHub, Linux, Docker, Rate Limiting, Load Testing

Projects

Uber Backend — Microservices

github.com/Jaspreet-5/Uber-Microservices

Node.js, Express.js, RabbitMQ, Docker

- Architected a ride-booking backend as independent user, captain, and ride microservices.
- Implemented an API Gateway as a single entry point routing all client requests to the services.
- Decoupled services via asynchronous RabbitMQ messaging, enabling independent development and scaling.
- Containerized each service with Docker for consistent, reproducible development environments.

URL Shortener API

github.com/Jaspreet-5/URL-Shortner

Node.js, Express.js, MongoDB

- Engineered a REST API that converts long URLs to unique short codes, validating input before storage.
- Secured the service with token bucket rate limiting to control request bursts and prevent abuse.
- Optimized redirect lookups with MongoDB indexes, keeping reads fast as the link collection grows.
- Implemented atomic click tracking so analytics stay accurate under concurrent requests.

E-Commerce Application

github.com/Jaspreet-5/e-commerce

React, Node.js, Express.js, MongoDB

- Developed a full-stack e-commerce platform: React front end, Node.js/Express REST API, MongoDB.
- Implemented authentication and RBAC, restricting product management routes to authorized users.
- Built complete cart and order workflows with shipping address management for customers.

Education

Bachelor of Computer Applications (BCA)

2024 - 2027

DAV College, Amritsar — Computer Science and Engineering

Currently in 3rd year
